### **MAGNETIC MEDIA DEGAUSSER RECERTIFICATION PROGRAM**

Re-certification of the NSA Approved MagEraSURE Degausser (Model P3E, P3 and/or P3M) is a simple process. Specially designed “Recertification Drives based on today’s high density hard disk recording technology” manufactured exclusively for SEM by Toshiba are used for this process.

The procedures are as follows:

- High Density Hard Disk Drive is shipped to the end user.
- End User degausses the drive by running it through the NSA Approved Degausser.
- The “degaussed” drive is then returned to SEM in the same box used to ship the drive. An SEM return address label is included in the package along with an UPS “Call Tag”.
- The drive arrives at SEM and is forwarded to Toshiba Labs where highly sophisticated instruments are used to measure the noise levels on the degaussed drive.
- A “Re-Certification” report is issued by Toshiba and is electronically forwarded to SEM via email.
- SEM forwards the “Re-certification” document to the End User via email and keeps a copy “on file” for future reference.

#### **IMPORTANT NOTE:**

**To assure that the product is certified to factory specifications, SEM only uses only High Coercivity Hard Disk Drives in the Re-Certification Process....in effect testing the degausser in a “worst case scenario”. This assures you that your product degausses LMR and PMR disk drives to current NSA approved levels. Recertification with other media, such as low coercivity Data Tapes or VHS tape, will NOT insure that the product meets factory specifications on the Higher Density Disk Drives required to meet NSA standards.**

#### ***What’s included in the Price:***

The Re-Certification process includes the cost of the specially designed High Density Hard Disk Drive, freight to the customer, return freight to SEM, freight to Toshiba Hard Disk Drive Certification Labs, the evaluation / test of the drive by Toshiba using highly sophisticated disk drive test equipment and the issuance of the Re-Certification Document.

For more information, feel free to contact SEM at 1-800-225-9293 or visit the SEM web site at [www.semshred.com](http://www.semshred.com)
