

SECURITY ENGINEERED MACHINERY

"When life and liberty are threatened to the point where an "emergency destruct" order is given, the stress is real... so are the consequences. DefenDisk is the fastest, safest, easiest method of emergency data destruction on the planet."

Specifications

Operating System:	Any OS supporting USB
Boot Options:	BIOS supported
General Dimensions:	16"L x 6.7"H x 7"W
Weight:	35 lbs
Input Voltage:	120VAC
Input Current:	10A max (during disabling process)
Degaussing Field:	4500 gauss
Storage Capacity:	1 terabyte
Data Transfer:	USB 2.0 compatible

Technical Data Sheet

DefenDisk™

Emergency Erase / Emergency Destruct External Hard Drive

Designed by former Air Force and NSA personnel, DefenDisk is an emergency data destruction tool for use in Embassies, Secure Facilities, High Value Asset Aircraft, Mobile Command Posts and other sensitive areas where data security is a top priority.

Because DefenDisk is used on your desktop just like any external USB hard drive, all of your sensitive data is stored on the internal DefenDisk drive; only your OS is on your PC hard drive. At the end of the day, remove the drive and lock it in your safe.

DefenDisk simplifies the data destruction process; when the enemy is at the gates, DefenDisk provides a fast, safe and simple method for data destruction. If an emergency situation occurs, simply flip the switch and push the button...continue with the rest of your emergency destruct checklist with confidence that your sensitive data is destroyed, in less than a minute – without any further interaction.

Features

- External storage for sensitive data
- Network capable to allow for remote destruction
- Removable drive tray for secure storage
- Disables hard drive in less than 60 seconds
- Plug-n-play
- Reusable; simply replace the hard drive
- Internal Hard Drive 1TB
- Dual switch configuration to disable drive; preventing accidental destruction
