PREVENTATIVE MAINTENANCE **Model 0300, 0301, 0302 or 0304 Jackhammer Hard Drive Shredder**

Preventative Maintenance on SEM Hard Drive Shredders (Models 0300, 0301, 0302 and/or 0304) is a “scheduled” visit consisting of various functions to maintain the maximum effectiveness of the system. Maintenance is performed by an SEM authorized factory trained technician.

Preventative Maintenance on Hard Drive Shredders consists of the following;

- General Inspection of System to determine damage or excessive wear
- Greasing of various components (Bearings, Wear Plates, Pulley Bearings, Etc.)
- Lubrication of Cutters, Chains and other related parts. Fluid changes in accordance with maintenance schedule as recommended in operators manual.
- Belt and Chain Adjustments (System and Conveyor)
- General System Cleaning (Includes Cutting Chamber clean-out of magnet debris)
- Run System Check on overall machine performance.
- Electrical...Inspect all safety switches and push buttons for proper functioning.
- Complete evaluation report with recommendations
- Replacement parts are NOT included

A Preventative Maintenance Visit is recommended after 40 Hours of continuous use.
(Routine daily / weekly maintenance should be performed by the user in accordance with operator manual guidelines).
